

## **HAUL ROUTE CRITERIA**

- Assess
  - surface material (cobble stone & brick are not suitable surface material for haul route)
  - geometry of the street (narrow streets & tight radii are not suitable)
  - route from site to City limits (would street result in a “zigzag” route)
  - adjacent land uses (school playground/yard)
  - if there are current maintenance projects under way (Virginia Save Program)
  - if the street is a through street to Route 1
  - the bus traffic, pedestrian volumes, & special events
  
- Ultimate Goal: the most direct route into and out of the City resulting in the least amount of disruption to the community
